GERARD BOSCH

Software Engineer
Craftsman

SUMMARY

[*Read the full detailed CV at* https://gerardbosch.github.io/cv]

My background is mostly about designing/implementing backend systems. I have good analysis skills and can break down requirements well and transform that into code. Really concerned about the code itself, its readability and conciseness. Continuous improvement advocate and continuous refactor and code reuse as a mantra. Accidental-complexity fighter. Like learning, love crafting. Proactive and autodidact.

EXPERIENCE

Senior Software Engineer — GFT IT Consulting, 2016 - now

PROJECT HIGHLIGHTS (most relevant ones):

- *Banc Sabadell*: **Middleware Architecture** (2020...) – Redefine from scratch a whole new framework and development environment based on MsA, Spring Boot, API-First, Event Driven, DDD, Hexagonal and so forth – **Role**: Software Engineer.
- *Banc Sabadell*: **PSD2 & APIfication** (2018–2020) – Design & implement the APIs for the European regulatory PSD2 project, leading the first approach to API exposition for the Banc. Definine and implement architectural components for the MsA where I was established as the technical lead for the dev team – **Role**: Tech Lead.
- *Bankinter*: **Microservice Architecture** (2017) – Development of an architecture based on MsA and Spring, providing the pre-configured components: from security, tracing, audit, error handling to cryptography; enabling developers to easily get started.
- *Company presentation*: A technical introduction to Blockchain technology.

Software Engineer — ICG Software, 2014–2016

- Senior developer in charge of mobile solutions for business domains.
- Architecting mobile applications for Android and Windows Phone platforms.

Researcher/developer — AI Research Institute IIIA-CSIC, 2011–2013

Spanish National Research Council. Innpacto-2011 (Spanish Science and Innovation Ministry), *NEWMATICA: Intelligent and Energy Efficient Advanced System for Vacuum Waste Collection.*

- Research on artificial intelligence algorithms and machine learning.
- Implement *Approximate Dynamic Programming* (Reinforcement Learning) algorithms in order to optimize operational plans of waste collecting plants.
- Implement a waste collecting simulator, run simulations, collect data/process results.

EDUCATION *(to see more, view the cv version)*

M.Sc. Open Source Software Eng. — University of Lleida, 2011

- Master Thesis: *Setting up and deployment of Sauron system for DNS system management at University of Lleida.*
- Mobility program internship in *VIA UC*, Denmark.
